PROBLEM IDENTIFICATION ASSIGNMENT:

A) We need to check the data set of the employees and predict which kind of behavior is shown for resignation and make AI learn the resignation pattern through the input data set and AI need to do Employee Resignation Prediction. Based on the prediction, Call To Action can be performed by hiring new employee to fill in the to be created empty space.
B) Stage 1 - Machine learning / Deep Learning (As the input data set deals with numerical values)
   Stage 2 - Supervised Learning (As requirements are clear and both input and output data are available)
   Stage 3 - Classification
C) Project Title - **Employee Departure Prediction**
D) Dataset columns:
   No. of projects Handled
   Daily Time spent
   Monthly Time spent
   Monthly leave days
   Client Satisfaction range
   No. of escalations
   Department
   Salary range
   Resignation(0/1)
